Injection Moulding Smart Operations & Digital Workplace

“The vision is to have a unified strategic goal: managing all data sources on a modern and centralized platform, starting with injection moulding.”

Factory 4.0 Big Data Pilot Motivation
- Integrate all support systems into one Injection Moulding monitoring platform
- Implement industry standards and tools
- Solutions which are scalable and centralized
- Deploy standardized data structures
- Re-usable models and visualizations

Big Data Assisted Injection Moulding Process
- Gather process data across many machines
- Use insights and predictions to improve process performance
- Use real-time data to automatically adjust process steering parameters

Competitive Advantages
- Gather process data across many different IM-machines
- One standardized approach for connecting Injection Moulding processes
- Reduce costs of operation by
  - Predictive Quality: Improvement on Fall Off Rate
  - Predictive Maintenance: Reduce down time
  - Intelligent process control

Big Data Pilot Lifecycle Scope
- Digital Engineering
- Production Planning
- Smart Operations
- Smart Production
- Smart Services

Platform Scoping
Boost 4.0 big data solution framework leverages on Big Data Europe (BDE) big data pipeline technologies, International Data Spaces Association (IDSA) specifications for data sovereignty, FIWARE NGSI-LD API for open IDS implementation and Hyperledger technologies for transaction traceability. Boost 4.0 big data platforms and technologies align to RAMI 4.0 and are integrated under the Digital Shopfloor Alliance (DSA) autonomous service framework to ensure reduced cost, time and effort in solution deployment and extensibility (https://digitalshopflooralliance.eu/).

I4.0 Big Data Pilot Solution Framework

I4.0 Big Data Pilot Features

Sector / Product: Consumer Electronics
Manufacturing Process: Injection Moulding
Big Data Analytic Techniques: Real time processing using machine learning, Time Series analysis

Big Data Platforms:
- Azure Data Lake
- Azure Time Series Insights

IDS-FIWARE Connectors & Standards:
- Philips Global Data Connections
- Standard connectivity protocols

Open I4.0 Big Data Pilot Pillars

IDSA defines a reference architecture and an ecosystem, which supports sovereign exchange and sharing of data between industrial partners.

FIWARE is a curated framework of open source platform components to accelerate the development of smart solutions for Industry 4.0.

HYPERLEDGER is an open source collaborative effort created to advance cross-industry blockchain technologies.

The BDE offers an open source platform, allowing to build several Big Data components into a pipeline through a simple graphical UI.
